

# JOB SAFETY ANALYSIS (JSA)

Date:

JSA #:

New

Revised

A Job Safety Analysis (JSA) should be performed for all operations, and especially for those that result in employee injury or have the potential for injury. A JSA can also be used to analyze work practices for effectiveness and to map job safety procedures. A JSA has four basic steps: (1) Select the job to be analyzed; (2) Break the job down into steps; (3) Identify the hazards or potential hazards for each step; and (4) Develop controls or solutions for each of the hazards or potential hazards.
